- 9) Provide management support to the Bureau Director for matters concerning spacecrafts and space systems and its contribution to attainment of the Agency's six key development areas;
- 10) Contribute in laying down of policies and programs for space R&D and its practical applications; and
- 11) Perform other duties of a regular or special nature as may be assigned from time to time.

**Applicants who have all or any of the following background are encouraged to apply:**

### Educational Background:

Doctoral/Master's degree in Engineering or Sciences such as in Physics, Aerospace Engineering, Electronics Engineering, Electrical Engineering, Communications Engineering, Mechanical Engineering, Systems Engineering or other allied fields.

### Experience and Training Background:

- Satellite development project - as project manager, system engineer, communications engineer, payload engineer or other relevant technical roles
- Designing, developing, testing and integrating communications systems/subsystems or payloads (e.g., optical, multispectral, hyperspectral, radiometry, radar, communications, etc.)
- Digital electronics / communication systems, front-end electronics and/or electro-optical engineering

**Applicants who have all or any of the following background are encouraged to apply:**

Familiarity or proficiency in any of the following is expected:

- Any programming language (C, C++, C#, Python, Matlab, etc.)
- ECAD Design and Layout software
- RF/microwave circuit design & analysis software
- Electromagnetic design & analysis software
- FPGA
- Mechanical computer-aided design (CAD) & analysis software e.g., as used for opto-mechanical design
